

CABLE FIXED DEVICE

ABSTRACT OF THE DISCLOSURE

A cable fixed device comprises a seat body having a receiving cavity inside, a movable handle provided in the seat body and
5 sliding upward and downward with two springs, and a coupling member fixedly fastened to the movable handle and coupled to a track at a driving plate inside the receiving cavity and adapted to guide movement of the movable handle along the track and to
selectively lock the movable handle between the extended
10 operative position and the received non-operative position.
